

Jenne[®] Staging and Provisioning Services

Do you have geographically dispersed customers? Deploying remotely? In a time crunch? Use Jenne's Staging and/or Provisioning Integration Services!

Jenne performs all the preliminary configurations, licensings and upgrades to IP PBX, networking equipment, or SIP endpoints before they ship for installation to save your company time and resources at the jobsite. Jenne typically separates staging from provisioning. **Why?** Staging is the complete setup and testing of PBX equipment before it ships to allow plug-and-play at the installation site. Provisioning is the pre-configuration of SIP endpoints.

Why use Jenne's staging and/or provisioning services?

- Save your technician's time for more mission critical tasks
- Makes CPE (customer premise equipment) sourcing streamlined and efficient
- White-glove service
- Eliminate frustrating configurations
- Saves money by shipping once to the end user
- Peace of mind knowing the product has been configured and updated to work out-of-box

Jenne will provide the following services:

Staging services:

- IP PBX custom staging and testing
- Data Networking custom staging and testing
- Licensing uploads
- Burn-in
- Software installation
- Quality checks and diagnostic testing
- Extended warranty registration
- Kitting and BOM assembly
- Packaging and shipping

Provisioning services:

- Provisioning server address entered into phone
- Username/Password authentication
- Firmware upgrades
- Custom configuration files
- Asset tagging/Box labeling
- Material inserts
- Custom packaging and shipping

Jenne performs these services for equipment from the following manufacturers:
