

MIMI

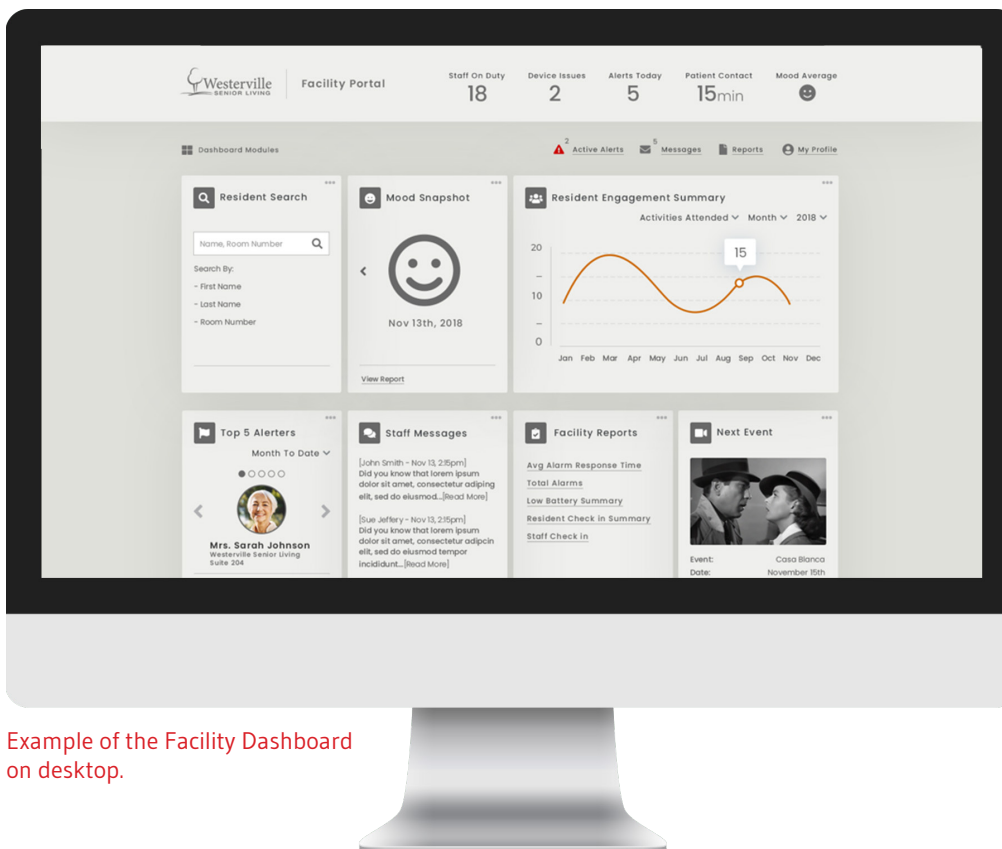

# Merging Information into Meaningful Insights

MIMI incorporates the most relevant data within our solution suite and presents it on an analytics dashboard, **providing the right information, to the right people, at the right time.**

## Facility Dashboard

- For facility administrators and operators information can be accessed about the entire facility. User roles from staff user to a corporate user will be available so that a user can look at data for multiple sites across their corporation.
- Resident Engagement data will also be accessible via this dashboard.
- Mood will be collected by residents through CATIE and staff will be able to input resident's mood via the staff dashboard.

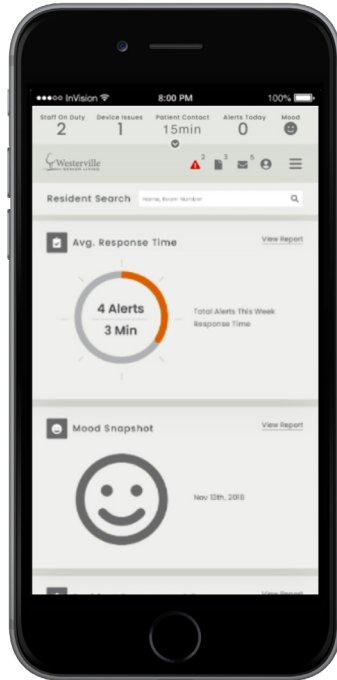

Example of the Facility Dashboard on desktop.

- The modules you see will be clickable and take the user to interactive reporting engine to allow for many different types of report and ways to visualize the data.
- Users will also be able to just go to the reports section and run their own custom reports.
- The resident search function allows staff and admins to search for a specific resident and look at the data specific to that resident. This will then lead the user to the staff dashboard module.

MIMI

Example of the Staff Dashboard on mobile.

### Staff Dashboard

- For staff members to access and review.
- A snapshot of information about a specific resident before visiting their residence.
- In the residence a staff member will be able to check into the room and provide brief notes about why they are with the resident via reason codes.
- The staff member will have the option to leave internal notes for other staff members as well family facing notes to the residents family members accessible via the family portal.

Example of the Family Portal on laptop.

### Family Portal

- For family members of residents to gain basic insights into a particular resident's activities and overall health based on resident engagement and emergency alerting.
